Stakeholder Map · Revision 7401

Proposed QA Control Review / participation and decision rights

PEOPLE	RELATIONSHIPS	NEXT CONVERSATIONS
Who is affected?	Who contributes and decides?	What needs confirmation?

1. People and roles

QA and night-shift operators

As shown by W03-S01, QA are dependent on a night-shift operator to review the workflow, preserved original evidence, review sessions organized around shift duties, and other easy to miss details. It is important to note, however, that a night-shift operator has yet to go through the process of being selected and interviewed

Engineering

According to W03-S02, Engineering is capable of explaining the available command and scheduler records as well as review technical interpretations. They require read-only exports with source details, which will be supplied by a record custodian (confirmation pending).

Operations

Operations will review the Week 2 recommendation regarding its call to proceed, revise, defer, or decline. They need a usable decision route and a clear summary of recent evidence, and they have the capability to confirm established contacts, but they cannot approve spending.

Sponsor and record custodian

QA, Engineering, and Operations are all listed as participants in the QA records workstation supplied by W03-S03. The record custodian shows no listed contact and no evidence to suggest that the position has been accepted yet, but that is not to imply that the company does not have a custodian. The sponsor, the main authority, still needs to confirm authorization of each of the departments to work.

2. Relationships and next steps

Competing needs and tradeoff

Nia represents the QA, and she proposes a night-shift operator meeting to accommodate for her own schedule and night-shift duties. Mara suggests a daytime meeting where operations can receive a clear route for decisions and a usable summary of consultants.

Consultation plan

I must consult Nia about the night-operator. Contacting and interviewing a night-operator must be confirmed with by the sponsor before the morning meeting takes place in order to ensure that the night QA is properly consulted, because they would otherwise be left in the dark on specific details that could interfere with the QA's regular work. I must consult Elias, and ask about the record custodian, and how he should Mara about confirming the contact information of a record custodian for us to consult before the delivery dates are finalized. I must consult Mara on the topic of the morning meeting, and how she should consult the sponsor to schedule an official meeting to discuss pertinent details.

Missing voices and validation

The record custodian has yet to confirm their participation in the short-access discussion that Elias had requested to seek confirmation. Mara will confirm the selection of a custodian, and their contact information will be recorded in the participation entries for further business.

Next step toward requirements

First, we must confirm that Mara's suggestion for a daytime meeting is confirmed. On that note, if it is confirmed, we must establish whether or not Nia's request that a night-shift operator attend the meeting to confirm if the suggested workflow fits QA work, though an operator scheduled for that time remains to be found and interviewed. Additionally, Elias has also requested that a record custodian attend a short access discussion to review and confirm the delivery dates of necessary documents and files. His request for a record custodian remains on standby, as there is no supplied contact information for a record custodian in the records. Ultimately, my map shows us the necessary people that we would need to request access to in the event that the project would be authorized, giving us a head-start, but ensuring that we are not immediately dumping all of our resources into finding contacts.

3. Book evidence connection

Book form connection

The tools given to me improved my consultation plan because they allowed me to get a better look at the system that I have introduced myself to, and create complex reports and form departmental relationships that allow participants to visualize the many interacting relationships within the organization.
